Zoho Creator Platform Architecture

241401008

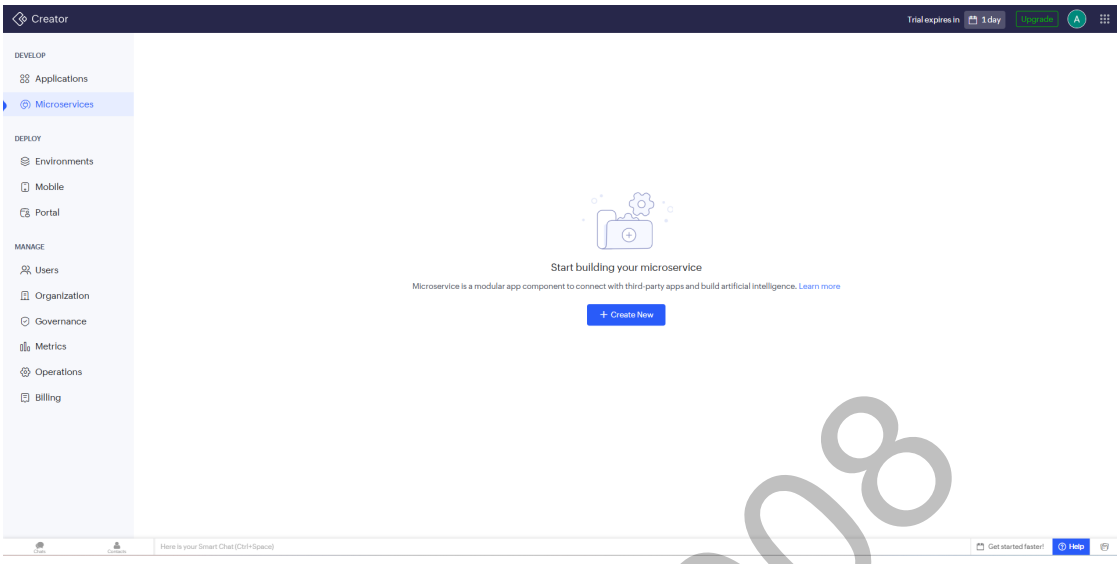

High-level structure of the Zoho Creator console, organized into three areas: DEVELOP (building apps), DEPLOY (releasing them), and MANAGE (administration).

1. Applications Dashboard

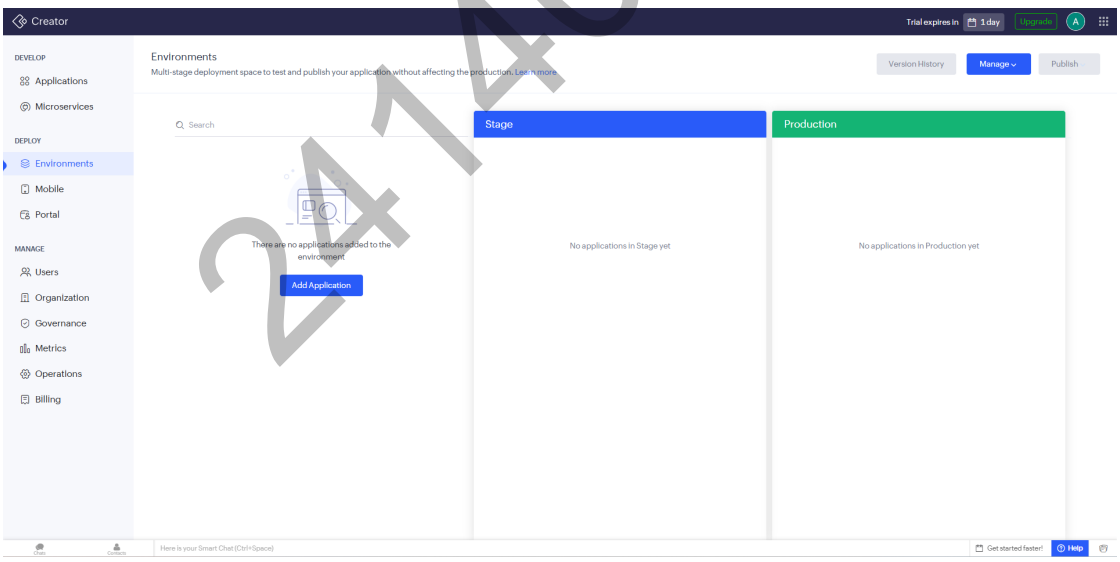

This is the DEVELOP > Applications section, the landing page after logging into Zoho Creator. It lists the three apps built so far: Library Management System, my second app, and My first Creator app, all created on Jul 27, 2026. From here, each app can be opened, edited, or managed.

2. Microservices

The Microservices section is currently empty. Microservices are modular app components used to connect Zoho Creator with third-party apps and to build AI-driven features. New ones can be created using the "Create New" option shown here.

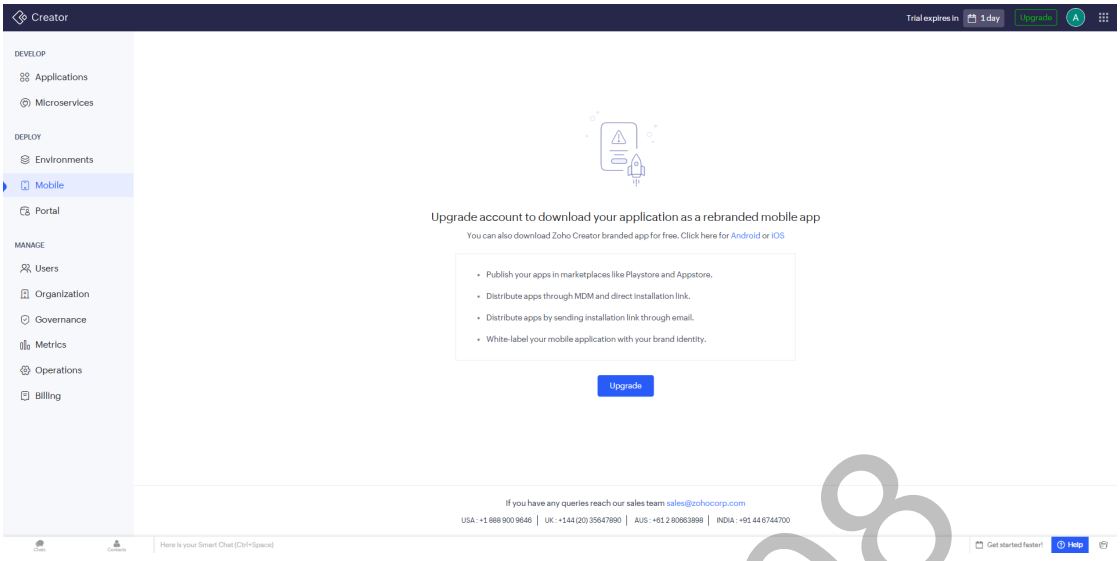

3. Environments

This page shows the Stage and Production environments under DEPLOY. Both are currently empty, meaning no applications have been added yet. This space is meant for testing apps in Stage before publishing them to Production without affecting live users.

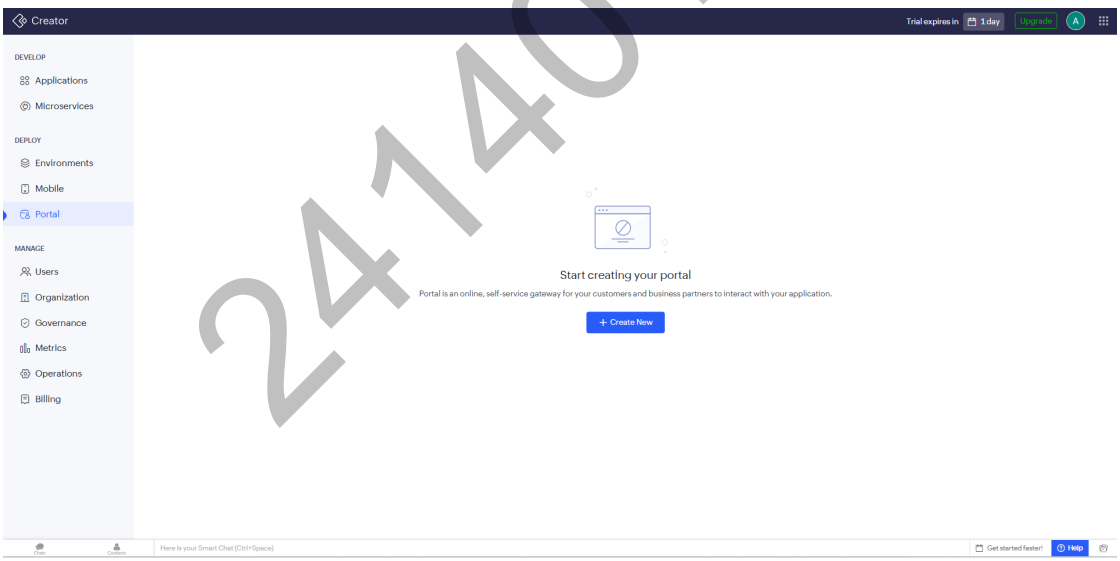

24140 1008

4. Mobile

The Mobile section prompts an account upgrade to publish a rebranded mobile app to app stores. Without upgrading, a free Zoho Creator branded version of the app can still be downloaded for Android or iOS, though without custom branding or white-labeling.

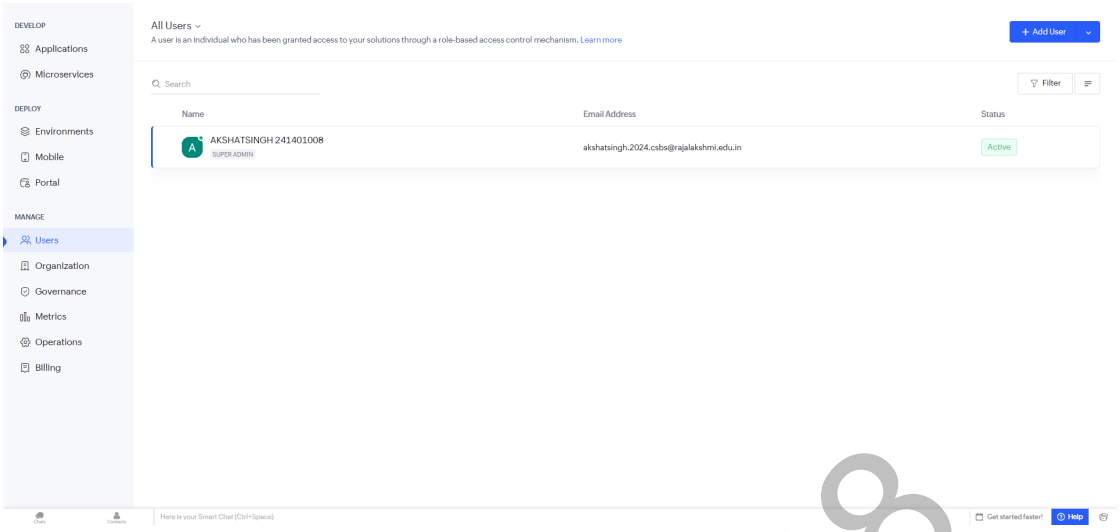

5. Portal

The Portal section is empty by default. A portal acts as a self-service gateway that lets customers and business partners interact directly with the application, separate from internal user access. Clicking "Create New" would start setting one up.

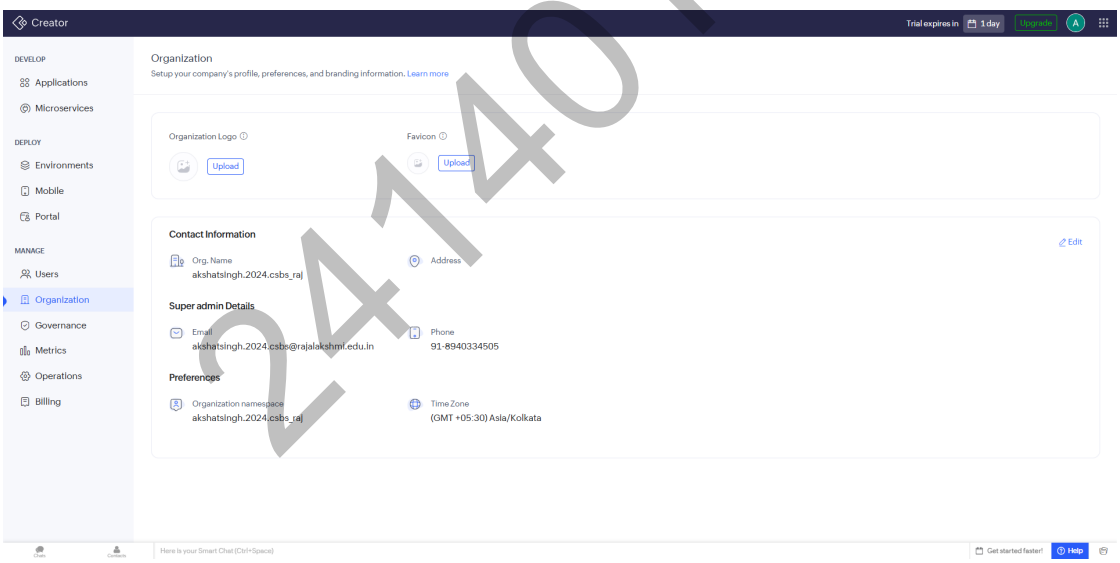

24140108

6. Users

This is the Users management page under MANAGE. It currently lists a single active user, AKSHATSINGH 241401008, who holds the Super Admin role, along with their registered institutional email address and account status.

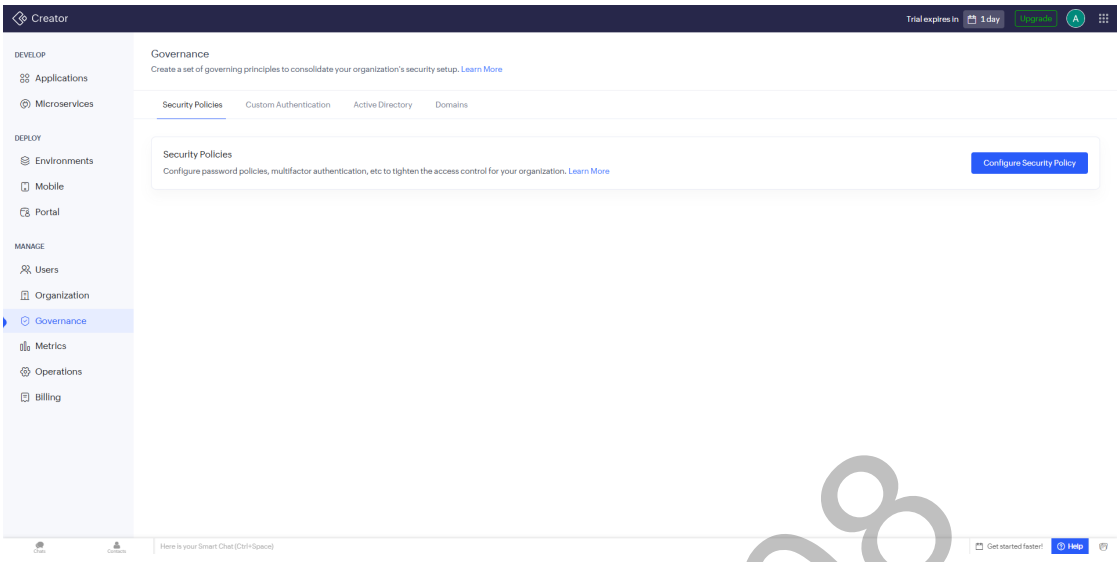

7. Organization

The Organization settings page displays company-level configuration: the organization name, super admin contact details (email and phone number), and preferences such as the organization namespace and time zone, which is set to (GMT +05:30) Asia/Kolkata.

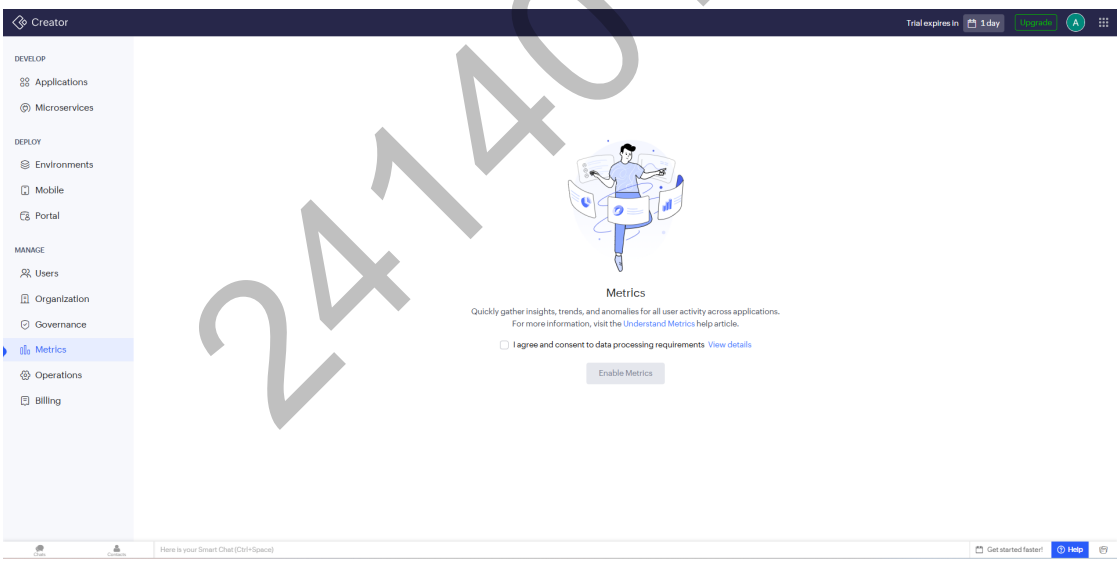

241401008

8. Governance

This is the Security Policies tab within Governance. It allows configuration of password policies, multi-factor authentication, and other access control rules that apply across the organization. Other tabs here include Custom Authentication, Active Directory, and Domains.

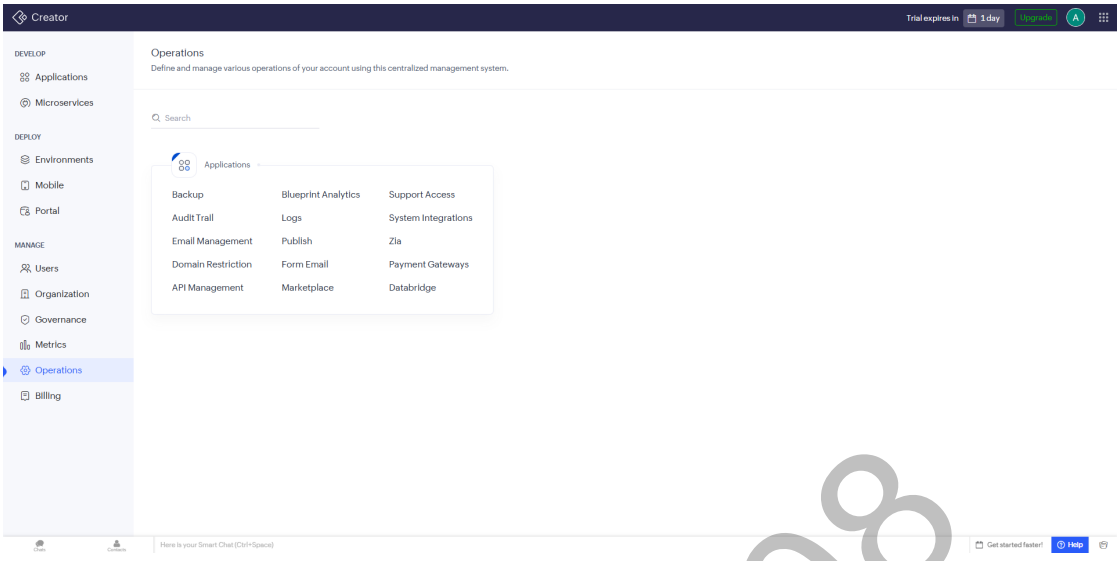

9. Metrics

The Metrics page gathers insights, trends, and anomalies for user activity across applications. Before it can be enabled, consent to the platform's data processing requirements is required, which is why the "Enable Metrics" button is currently disabled.

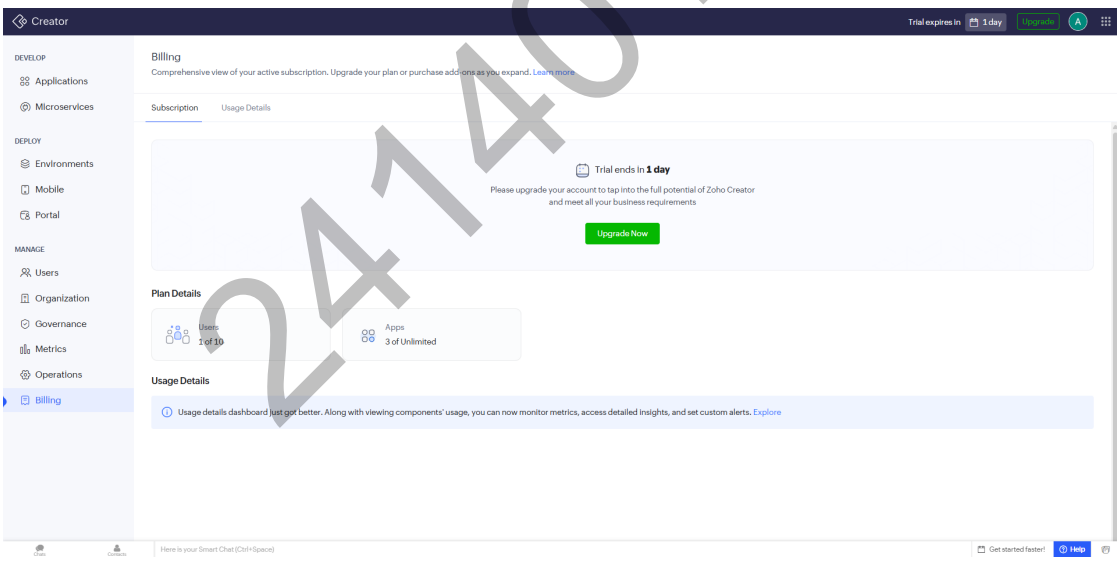

24140108

10. Operations

The Operations page centralizes account-level management tools, including Backup, Audit Trail, Email Management, API Management, Logs, Publish, Marketplace, System Integrations, and Payment Gateways, all accessible from this single dashboard.

11. Billing

The Billing page gives a summary of the active subscription. It shows the trial ending in 1 day, current plan usage of 1 of 10 available users and 3 of unlimited apps, along with an option to upgrade the account for continued access.
